**Acknowledgements:** We wish to acknowledge the tremendous support and guidance of Francis L. Delmonico, M.D., Director of Medical Affairs, The Transplantation Society, World Health Organization Advisory for Human Transplantation, Professor of Surgery Harvard Medical School, Massachusetts General Hospital Transplant Center, and Marcelo Cantarovich, President Canadian Society of Transplantation

1  
2  
3 **Preamble:** The Declaration of Istanbul on Organ Trafficking and Transplant Tourism[1]  
4 was developed after a directive from the World Health Assembly in 2004 (resolution  
5 57.18) which urged member states: ‘to take measures to protect the poorest and  
6 vulnerable groups from transplant tourism and the sale of tissues and organs, including  
7 attention to the wider problem of international trafficking in human tissues and  
8 organs’.[2] The Declaration of Istanbul[1] states that organ trafficking and transplant  
9 tourism should be prohibited because they violate the principles of equity, justice and  
10 respect for human dignity. The Declaration[1] aims to combat these activities that  
11 threaten the legacy of organ transplantation and the nobility of organ donation, and calls  
12 for each country to develop a legal and professional framework to govern organ donation  
13 and transplantation activities. The Declaration[1] calls for increased oversight of donation  
14 and transplant activity in member states to ensure donor and recipient safety, and the  
15 prohibition of unethical practices.

34  
35

36 In response to The Declaration,[1] members of the Canadian Society of Transplantation  
37 and the Canadian Society of Nephrology developed this policy document that will help  
38 establish a unified and consistent approach to deter transplant tourism by Canadian health  
39 care providers, and in so doing, will ensure the optimal care of Canadian patients with  
40 end organ failure. This policy document was produced with guidance of experts in  
41 Canadian medical law and bioethics. Where appropriate the document refers directly to  
42 existing documents that are accepted in Canadian medical practice such as the Canadian  
43 Medical Association Code of Ethics.[3] The document summarizes the official Policy of  
44 the Canadian Society of Transplantation and The Canadian Society of Nephrology and is  
45  
46

1  
2  
3 intended to assist members of these professional societies in their interactions with  
4 patients. The recommendations provide health care professionals with a framework to  
5 approach the subject of transplant tourism and organ trafficking with patients. Health care  
6 providers should be aware of the legal and regulatory requirements that govern medical  
7 practice in their jurisdictions.  
8  
9  
10  
11  
12  
13  
14  
15  
16

17 **Target Audience:** This document is relevant for Canadian health care provider involved  
18 in the care of patients who are either candidates for solid organ transplantation or  
19 recipients of a solid organ transplant. Although kidneys are the most common organ  
20 involved in organ trafficking, the trafficking of livers and hearts is also known to  
21 occur.[4] Therefore the information in this document is also relevant for health care  
22 providers involved in the care of any patient with end organ failure.

33  
34 **Definitions:**  
35  
36  
37

38 **a. Organ trafficking** is the recruitment, transport, transfer, harboring, or receipt  
39 of living or deceased persons or their organs by means of the threat or use of force  
40 or other forms of coercion, of abduction, of fraud, of deception, of the abuse of  
41 power or of a position of vulnerability, or of the giving to, or the receiving by, a  
42 third party of payments or benefits to achieve the transfer of control over the  
43 potential donor, for the purpose of exploitation by the removal of organs for  
44 transplantation.[1]  
45  
46

54  
55  
56  
57  
58  
59  
60

1  
2  
3 **b. Transplant commercialism** is a policy or practice in which an organ is treated  
4 as a commodity, including being bought or sold or used for material gain.[1]  
5  
6  
7

8  
9  
10 **c. Travel for transplantation** is the movement of organs, donors, recipients or  
11 transplant professionals across jurisdictional borders for transplantation purposes.  
12  
13 Travel for transplantation becomes **transplant tourism** if it involves organ  
14 trafficking and/or transplant commercialism or if the resources (organs,  
15 professionals and transplant centres) devoted to providing transplants to patients  
16 from outside a country undermine the country's ability to provide transplant  
17 services for its own population.[1]  
18

27  
28  
29  
30

31 **Background:** The Canadian Society of Transplantation and the Canadian Society of  
32 Nephrology endorse the Declaration of Istanbul[1] and condemn the practices of  
33 transplant tourism, organ trafficking and commercialization of organs that lead to the  
34 exploitation of the poor and the vulnerable, both within Canada and throughout the  
35 world. These practices are not subject to regulatory oversight by a legislatively  
36 empowered organization and as such may expose patients and donors to significant risk.  
37  
38  
39

43  
44  
45  
46  
47

48 Transplant tourism, organ trafficking and commercialization are illegal activities in most  
49 countries, including Canada. Despite these laws, there is an international market which  
50 transplants organs from vendors, prisoners or other vulnerable groups to recipients for  
51 money.  
52  
53

1  
2  
3  
4  
5  
6 **Purpose:** This document summarizes Canadian health care providers' fiduciary and legal  
7  
8 obligations to patients who participate in transplant tourism both prior to and after  
9  
10 transplantation.  
11

12  
13  
14  
15 The document:

- 16
- 17
- 18 • Provides recommendations for pre-transplant counseling
- 19
- 20 • Provides guidance regarding the pre-transplant evaluation of transplant
- 21 candidates
- 22
- 23
- 24
- 25 • Summarizes health care provider obligations for post-transplant care
- 26
- 27
- 28
- 29
- 30
- 31

32 **A. Recommendations for pre-transplant counseling:**

33

- 34
- 35
- 36
- 37 1. All patients with end stage organ failure who are candidates for transplantation should
- 38 receive information about the dangers and ethical concerns regarding transplant tourism
- 39 and organ trafficking.
- 40
- 41
- 42
- 43
- 44
- 45

46 Patients interested in purchasing a solid organ transplant should receive pre-transplant

47 counseling from a health care professional with expert knowledge of the pre and post

48 transplant medical and surgical management of transplant recipients.

49

50

51

52

53

54

55

56

57

58

59

60

1  
2  
3 2. Pre-transplant counseling should provide information regarding the safety of  
4  
5 purchasing a solid organ transplant. Patients should be told that individuals who purchase  
6  
7 transplants overseas are at an increased risk for complications, including death, organ  
8  
9 failure, and serious infections.[5-18]  
10  
11

12  
13  
14  
15 3. Health care providers cannot speculate regarding the relative safety of commercial  
16  
17 transplantation in different countries or institutions as reliable information regarding  
18  
19 specific centre or country outcomes are not available.  
20  
21

22  
23  
24 4. Patients should be told that those who obtain a transplant overseas may receive sub-  
25  
26 optimal care even when they return to Canada for the following reasons:  
27  
28

29  
30  
31 a. Poor Documentation and Communication about the transplant procedure  
32  
33

34  
35  
36 Canadian health care providers often receive little or no advance notice or  
37  
38 documentation of commercial transplantations, making the post-transplant care of  
39  
40 recipients of commercial transplantations more difficult. Without documentation  
41  
42 of the surgical procedure, post-transplant course and complications, Canadian  
43  
44 health care providers may not have the necessary information to provide optimal  
45  
46 care, diagnoses may be delayed, and the patient's well being may be  
47  
48 compromised.  
49  
50  
51  
52  
53  
54  
55  
56  
57  
58  
59  
60

1  
2  
3 Health care providers may make reasonable attempts to obtain clinical  
4  
5 information through the use of professional document translation, use of  
6  
7 interpreters, or even by attempting to contact the centre that performed the  
8  
9 transplantation. However, Canadian health care providers may not be able to  
10  
11 obtain reliable clinical information from such centres. Such procedures are  
12  
13 performed without regulatory authority and the information obtained cannot be  
14  
15 trusted or verified. Canadian health care providers have no ability to validate the  
16  
17 accuracy of any documents that may be provided by individuals or centres  
18  
19 engaging in transplant tourism and have no professional relationship with  
20  
21 individuals who may be performing illegal activities in their countries.  
22  
23  
24  
25  
26  
27 Uncertainty regarding the details of commercial transplantations may compromise  
28  
29 individual patient care.  
30  
31  
32  
33  
34  
35

36 b. Patients are transferred before they are clinically stable  
37  
38  
39  
40

41 Health care providers do not normally transfer or accept the care of recently  
42  
43 transplanted patients. Immediate post-transplant care is complicated and is best  
44  
45 directed by the original transplant team. When a transfer of care is necessary this  
46  
47 is usually deferred until the patient is clinically stable, weeks or months after  
48  
49 transplantation, and only with extensive documentation or direct discussion with  
50  
51 the responsible transplanting physician.  
52  
53  
54  
55  
56  
57  
58  
59  
60

1  
2  
3  
4  
5  
6 5. Health care providers should inform patients that individual provinces/territories  
7  
8 usually will not extend insurance coverage for medical or surgical expenses incurred by  
9  
10 patients in jurisdictions outside Canada related to the transplantation of an organ obtained  
11  
12 through transplant tourism for a variety of reasons including the fact that such procedures  
13  
14 are illegal and / or performed without the oversight of a legislatively empowered  
15  
16 organization.  
17  
18

19  
20  
21  
22 6. Patients should be educated regarding the unethical treatment of individuals who sell  
23  
24 their organs for money in unregulated systems in the developing world.  
25  
26  
27

28  
29 Physicians have a duty to advocate for their patients, but as members of the medical  
30  
31 community they also have a duty to prevent harm to other individuals. Patients should be  
32  
33 educated about the harms that may come to those who provide organs via transplant  
34  
35 tourism. Organ vendors are often exploited and may be substantially harmed when they  
36  
37 sell their organs.[4, 19-22] Further, organs have allegedly been taken by force and  
38  
39 individuals may even been killed in order to obtain their organs.[4] Transplant tourism is  
40  
41 illegal in most countries. The entire transplant tourism industry relies on secrecy, making  
42  
43 it is impossible to determine whether donor information provided by organ brokers, who  
44  
45 are motivated by financial gain, is accurate.  
46  
47  
48  
49

50  
51  
52  
53 7. Physicians have a responsibility to inform patients when their personal values would  
54  
55 influence the recommendation or practice of any medical procedure that the patient needs  
56  
57  
58  
59  
60

1  
2  
3 or wants (CMA Code of Ethics Item 12).[3] Therefore physicians should make patients  
4  
5 aware of any personal objections they may have about transplant tourism and advise  
6  
7 patients of their willingness to provide post-transplant care for patients who obtain  
8  
9 transplants through transplant tourism (see also section C below).  
10  
11  
12  
13

## 14 **B. Guidance regarding the pre-transplant evaluation of transplant candidates**

15  
16  
17  
18  
19  
20 1. Canadian physicians have a fiduciary responsibility to do what is in the best interest of  
21  
22 their patients including performing investigations, and prescribing medications that are  
23  
24 necessary for current clinical management. However, this obligation likely does not  
25  
26 include the performance of investigations in preparation for transplantation of a  
27  
28 purchased organ. Physicians should not prescribe medications or otherwise facilitate  
29  
30 obtainment of medications that will be used during the transplantation of a purchased  
31  
32 organ. Prescribing medications for treatment that the prescriber is not supervising  
33  
34 contravenes current Canadian medical standards of care. This statement is consistent with  
35  
36 CMA Code of Ethics Item 44 (Use health care resources prudently) and Canadian  
37  
38 Medical Association Code of Ethics Article 9, which states that physicians have a  
39  
40 fundamental responsibility to refuse to participate in or support practices that violate  
41  
42 basic human rights.[3]  
43  
44  
45  
46  
47  
48  
49

50  
51 2. Release of medical records related to the pre-transplant evaluation: Article 37 of the  
52  
53 CMA Code of ethics states that when requested physicians should provide patients with a  
54  
55 copy of their medical record unless there is a compelling reason to believe that the  
56  
57  
58  
59  
60

1  
2  
3 information contained in the record will result in substantial harm to the patient or others.  
4  
5 The Supreme Court of Canada has established that patients should have access to their  
6  
7 medical records in all but a small number of circumstances. In most cases health records  
8  
9 should be disclosed upon the request of the patient unless there is a significant likelihood  
10  
11 of a substantial adverse effect on the physical, mental or emotional health of the patient  
12  
13 or harm to a third party. The Supreme Court of Canada has ruled that “Non-disclosure  
14  
15 may be warranted if there is a real potential for harm either to the patient or to a third  
16  
17 party.”[23]  
18  
19  
20  
21  
22

23  
24 There is substantial evidence that the illegal transplantation of organs in an unregulated  
25  
26 system poses significant risk to both recipients and organ vendors. Therefore individual  
27  
28 physicians may elect not to provide medical records to patients if they believe the  
29  
30 information will be used in support of an illegal transplant performed in an unregulated  
31  
32 system and that there is significant risk of harm to either the patient or organ vendor.  
33  
34  
35  
36  
37

### 38 **C. Post-transplant Obligations:**

39  
40  
41  
42

43 Preamble: The following statements outline physicians’ responsibilities to provide care  
44  
45 and considerations related to physician refusal to provide care to any patient. The  
46  
47 information is provided to ensure physicians understand their obligations and is not  
48  
49 intended to promote refusal of patient care.  
50  
51  
52  
53  
54

55 1) Physicians are obligated to care for any patient in emergent need, including patients  
56  
57 who may have obtained an organ through transplant tourism. (Refer to CMA Code of  
58  
59  
60

1  
2  
3 Ethics Article 18 -Provide whatever appropriate assistance you can to any person with an  
4  
5 urgent need for medical care).  
6  
7

8  
9  
10 2) In non-emergent situations individual physicians may elect to defer care to another  
11  
12 physician. Ideally the physician would discuss their preference to defer post-transplant  
13  
14 care to another physician prior to transplantation to avoid any expectation of post-  
15  
16 transplant care by the patient. In such situations the physician should ensure that the  
17  
18 patient has reasonable access to the proposed alternative care provider and that the  
19  
20 deferral is not discriminatory to any individual patient.  
21  
22  
23

24  
25  
26 3) Having accepted professional responsibility for a patient, the physician must continue  
27  
28 to provide services until they are no longer required or wanted; or until arrangements  
29  
30 have been made for another suitable physician to assume care of the patient. In situations  
31  
32 where a physician elects to transfer care to another physician the patient must be provided  
33  
34 with reasonable notice of the physicians decision to terminate the relationship and to  
35  
36 transfer care to another physician. (Art 19, CMA code of ethics).  
37  
38  
39  
40  
41  
42  
43  
44  
45  
46  
47  
48  
49  
50  
51  
52  
53  
54  
55  
56  
57  
58  
59  
60
