The Declaration of Istanbul
on Organ Trafficking and Transplant Tourism
Preamble
Organ transplantation, one of the medical miracles of the twentieth century, has prolonged and improved the lives of hundreds of thousands of patients worldwide. The many great scientific and clinical advances of dedicated health
professionals, as well as countless acts of generosity by organ donors and their families, have made transplantation not only a life-saving therapy but a shining symbol of human solidarity. Yet these accomplishments have been tarnished by numerous reports of trafficking in human beings who are used as sources of organs and of patient-tourists from rich countries who travel abroad to purchase organs from poor people. In 2004, the World Health Organization, called on member states “to take measures to protect the poorest and vulnerable groups from transplant tourism and the sale of tissues and organs, including attention to the wider problem of international trafficking in human tissues and organs” (1).

To address the urgent and growing problems of organ sales, transplant tourism and trafficking in organ donors in the context of the global shortage of organs, a Summit Meeting of more than 150 representatives of scientific and medical bodies from around the world, government officials, social scientists, and ethicists, was held in Istanbul from April 30 to May 2, 2008. Preparatory work for the meeting was undertaken by a Steering Committee convened by The Transplantation Society (TTS) and the International Society of Nephrology (ISN) in Dubai in December 2007. That committee’s draft declaration was widely circulated and then revised in light of the comments received. At the Summit, the revised draft was reviewed by working groups and finalized in plenary deliberations.
This Declaration represents the consensus of the Summit participants. All countries need a legal and professional framework to govern organ donation and transplantation activities, as well as a transparent regulatory oversight system that ensures donor and recipient safety and the enforcement of standards and prohibitions on unethical practices.
ensure that programs to prevent organ failure are implemented and to provide organs to meet the transplant needs of its residents from donors within its own population or through regional cooperation. The therapeutic potential of deceased organ donation should be maximized not only for kidneys but also for other organs, appropriate to the transplantation needs of each country. Efforts to initiate or enhance deceased donor transplantation are essential to minimize the burden on living donors. Educational programs are useful in addressing the barriers, misconceptions and mistrust that currently impede the development of sufficient deceased donor transplantation; successful transplant programs also depend on the existence of the relevant health system infrastructure.

Access to healthcare is a human right but often not a reality. The provision of care for living donors before, during and after surgery—as described in the reports of the international forums organized by TTS in Amsterdam and Vancouver (2-4)—is no less essential than taking care of the transplant recipient. A positive outcome for a recipient can never justify harm to a live donor; on the contrary, for a transplant with a live donor to be regarded as a success means that both the recipient and the donor have done well.

يشكل توفير الرعاية الصحية أحد الحقوق الإنسانية والتي غالباً ما تكون غير واقعية. حيث يعتبر توفير الرعاية المتبرع الحي أحد أعضائه قبل وأثناء وبعد العملية الجراحية (حسب التقارير العالمية لجمعية زراعة الأعضاء في أمستردام وفانكوفر) مطلباً أساسياً يوازي الرعاية الخاصة للمريض المستقبلي. ولا يمكن قبول نجاح النتائج للمريض على حساب نجاح المتبرع الحي، بل على العكس يجب أن تتحقق ممارسة زراعة الأعضاء بالتبرع من الأحياء أن تكون ناجحة بالنسبة للمريض والمتبرع الحي على حد سواء.

Enable transfer of care for living donors; must be done well.
This Declaration builds on the principles of the Universal Declaration of Human Rights (5). The broad representation at the Istanbul Summit reflects the importance of international collaboration and global consensus to improve donation and transplantation practices. The Declaration will be submitted to relevant professional organizations and to the health authorities of all countries for consideration. The legacy of transplantation must not be the impoverished victims of organ trafficking and transplant tourism but rather a celebration of the gift of health by one individual to another.

Definitions

Organ trafficking is the recruitment, transport, transfer, harboring or receipt of living or deceased persons or their organs by means of the threat or use of force or other forms of coercion, of abduction, of fraud, of deception, of the abuse of power or of a position of vulnerability, or of the giving to, or the receiving by, a third party of payments or benefits to achieve the transfer of control over the potential donor, for the purpose of exploitation by the removal of organs for transplantation (6).

تعريف:

تجارة الأعضاء: هي إمداد أو نقل أو تحويل أو إخفاء أو إستلام الأشخاص الأحياء أو المتوفين أو أعضائهم عن طريق التهديد أو استخدام القوة أو الأشكال الأخرى من الإكراه أو الخطف أو الخداع أو الإحتيال أو سوء استخدام الصلاحيات أو عن طريق التغريب أو بإعطاء مقابل أو دفع من قبل طرف آخر لتحقيق نقل السيطرة على الشخص الراغب بالتبرع بهدف استغلال استئصال الأعضاء وإستخدامها في الزراعة.
Transplant commercialism is a policy or practice in which an organ is treated as a commodity, including by being bought or sold or used for material gain. Travel for transplantation is the movement of organs, donors, recipients or transplant professionals across jurisdictional borders for transplantation purposes. Travel for transplantation becomes transplant tourism if it involves organ trafficking and/or transplant commercialism or if the resources (organs, professionals and transplant centers) devoted to providing transplants to patients from outside a country undermine the country’s ability to provide transplant services for its own population.

المبادئ:

1. National governments, working in collaboration with international and non-governmental organizations, should develop and implement comprehensive programs for the screening, prevention and treatment of organ failure, which include:
   a. The advancement of clinical and basic science research;
   b. Effective programs, based on international guidelines, to treat and maintain patients with end-stage diseases, such as dialysis programs for renal patients, to minimize morbidity and mortality, alongside transplant programs for such diseases;
   c. Organ transplantation as the preferred treatment for organ failure for medically suitable recipients.
2. ضرورة وضع قوانين أو تنظيمات في كل بلد للإشراف على ممارسة إستئصال الأعضاء من المتوفين أو الأحياء والإشراف على ممارسة زراعة الأعضاء تماشياً مع المعايير العالمية:
أ. وضع دليل إجراءات واضح من أجل زيادة أعداد الأعضاء المتوفرة للزراعة تماشياً مع هذه المبادئ.
ب. تحتاج ممارسة التبرع بالأعضاء وزراعتها لإشراف ومراقبة من الهيئات الصحية في كل بلد من أجل التأكد من شفافية الممارسة وسلامتها.
ج. يتطلب الإشراف وجود سجل وطني أو إقليمي لتسجيل المتبرعين بالأعضاء بعد الوفاة والأحياء.
د. تتضمن العناصر الأساسية لوجود برنامج فعال وجود برنامج تثقيفي لعامة الناس وتعليمي / تدريبي للقطاع الصحي مع تحديد المسؤوليات والصلاحيات لممارسي البرنامج على المستوى الوطني للتبرع بالأعضاء وفرق زراعة الأعضاء.

2. Legislation should be developed and implemented by each country or jurisdiction to govern the recovery of organs from deceased and living donors and the practice of transplantation, consistent with international standards.
   a. Policies and procedures should be developed and implemented to maximize the number of organs available for transplantation, consistent with these principles;
   b. The practice of donation and transplantation requires oversight and accountability by health authorities in each country to ensure transparency and safety;
   c. Oversight requires a national or regional registry to record deceased and living donor transplants;
   d. Key components of effective programs include public education and awareness, health professional education and training, and defined responsibilities and accountabilities for all stakeholders in the national organ donation and transplant system.
3. Organs for transplantation should be equitably allocated within countries or jurisdictions to suitable recipients without regard to gender, ethnicity, religion, or social or financial status.
   a. Financial considerations or material gain of any party must not influence the application of relevant allocation rules.

4. The primary objective of transplant policies and programs should be optimal short- and long-term medical care to promote the health of both donors and recipients.
   a. Financial considerations or material gain of any party must not override primary consideration for the health and well-being of donors and recipients.

5. It is also the duty of the countries and regional groups to ensure the availability of organs for transplantation in order to fulfill the right to health for the local residents.
   a. It is important to have cooperation among the countries with a priority of fulfilling the needs of the recipients and ensuring the rights of the donors and recipients, without infringing on these principles.

   Moreover, the treatment of a patient outside the country or region should be considered only when it does not affect the ability of the country to provide organ transplantation services for its residents.

In summary, ensuring equitable organ allocation involves considering factors such as gender, ethnicity, religion, and social status. Financial considerations or material gain should not influence the allocation process. The primary objective should be to provide optimal medical care in the short and long term to promote the health of both donors and recipients. Cooperation among countries and regional groups is necessary to ensure the availability of organs for transplantation, particularly for the local residents. Cooperation should aim at protecting the needs of the donors and recipients and avoiding违背这些原则。
5. Jurisdictions, countries and regions should strive to achieve self-sufficiency in organ donation by providing a sufficient number of organs for residents in need from within the country or through regional cooperation.
   a. Collaboration between countries is not inconsistent with national self-sufficiency as long as the collaboration protects the vulnerable, promotes equality between donor and recipient populations, and does not violate these principles;
   b. Treatment of patients from outside the country or jurisdiction is only acceptable if it does not undermine a country’s ability to provide transplant services for its own population.

6. Organ trafficking and transplant tourism violate the principles of equity, justice and respect for human dignity and should be prohibited. Because transplant commercialism targets impoverished and otherwise vulnerable donors, it leads inexorably to inequity and injustice and should be prohibited. In Resolution 44.25, the World Health Assembly called on countries to prevent the purchase and sale of human organs for transplantation.
a. Prohibitions on these practices should include a ban on all types of advertising (including electronic and print media), soliciting, or brokering for the purpose of transplant commercialism, organ trafficking, or transplant tourism.
b. Such prohibitions should also include penalties for acts—such as medically screening donors or organs, or transplanting organs—that aid, encourage, or use the products of, organ trafficking or transplant tourism.
c. Practices that induce vulnerable individuals or groups (such as illiterate and impoverished persons, undocumented immigrants, prisoners, and political or economic refugees) to become living donors are incompatible with the aim of combating organ trafficking, transplant tourism and transplant commercialism.

المقترحات:

تقترح قمة أسطنبول بالتوافق مع هذه المبادئ الخطية التالية لزيادة عدد المتبرعين بالأعضاء لمنع الإتجار بالأعضاء ولتشجيع التبرع الشرعي وبرامج القانونية.

Proposals
Consistent with these principles, participants in the Istanbul Summit suggest the following strategies to increase the donor pool and to prevent organ trafficking, transplant commercialism and transplant tourism and to encourage legitimate, life-saving transplantation programs:

لإجابة الحاجة لزيادة التبرع بالأعضاء من المتوفين:

1. يجب على الحكومات بالتعاون مع المؤسسات الصحية والأطباء والمؤسسات غير الحكومية من وضع الخطط المناسبة لزيادة حالات التبرع بالأعضاء من المتوفين وإزالة العقبات التي تحول دون ذلك.

To respond to the need to increase deceased donation:

1. Governments, in collaboration with health care institutions, professionals, and non-governmental organizations should take appropriate actions to increase deceased organ donation. Measures should be taken to remove obstacles and disincentives to deceased organ donation.
2. In countries without established deceased organ donation or transplantation, national legislation should be enacted that would initiate deceased organ donation and create transplantation infrastructure, so as to fulfill each country’s deceased donor potential.

3. In all countries in which deceased organ donation has been initiated, the therapeutic potential of deceased organ donation and transplantation should be maximized.

4. Countries with well established deceased donor transplant programs are encouraged to share information, expertise and technology with countries seeking to improve their organ donation efforts.

To ensure the protection and safety of living donors and appropriate recognition for their heroic act while combating transplant tourism, organ trafficking and transplant commercialism:

1. The act of donation should be regarded as heroic and honored as such by representatives of the government and civil society organizations.
2. The determination of the medical and psychosocial suitability of the living donor should be guided by the recommendations of the Amsterdam and Vancouver Forums (2-4).
   a. Mechanisms for informed consent should incorporate provisions for evaluating the donor’s understanding, including assessment of the psychological impact of the process;
   b. All donors should undergo psychosocial evaluation by mental health professionals during screening.

3. The care of organ donors, including those who have been victims of organ trafficking, transplant commercialism, and transplant tourism, is a critical responsibility of all jurisdictions that sanctioned organ transplants utilizing such practices.

4. Systems and structures should ensure standardization, transparency and accountability of support for donation.
   a. Mechanisms for transparency of process and follow-up should be established;
   b. Informed consent should be obtained both for donation and for follow-up processes.
5. Provision of care includes medical and psychosocial care at the time of donation and for any short- and long-term consequences related to organ donation.

a. In jurisdictions and countries that lack universal health insurance, the provision of disability, life, and health insurance related to the donation event is a necessary requirement in providing care for the donor;
b. In those jurisdictions that have universal health insurance, governmental services should ensure donors have access to appropriate medical care related to the donation event;
c. Health and/or life insurance coverage and employment opportunities of persons who donate organs should not be compromised;
d. All donors should be offered psychosocial services as a standard component of follow-up;
e. In the event of organ failure in the donor, the donor should receive:
i. Supportive medical care, including dialysis for those with renal failure, and
ii. Priority for access to transplantation, integrated into existing allocation rules as
they apply to either living or deceased organ transplantation.

6. Comprehensive reimbursement of the actual, documented costs of donating
an organ does not constitute a payment for an organ, but is rather part of the
legitimate costs of treating the recipient.

a. Such cost-reimbursement would usually be made by the party responsible for
the costs of treating the transplant recipient (such as a government health
department or a health insurer);

b. Relevant costs and expenses should be calculated and administered using
transparent methodology, consistent with national norms;

c. Reimbursement of approved costs should be made directly to the party
supplying the service (such as to the hospital that provided the donor’s medical
care);

d. Reimbursement of the donor’s lost income and out-of-pocket expenses
should be administered by the agency handling the transplant rather than paid
directly from the recipient to the donor.

7. تتضمن المصاريف المشروعة والتي يمكن تعويضها ما يلي:

أ. تكاليف أية تقييمات طبية أو نفسية للمتبرعين الأحياء الذين تم
إقصاؤهم عن التبرع لأسباب طبية أو مناعية تم كشفها أثناء
عملية التبرع.
7. Legitimate expenses that may be reimbursed when documented include:
   a. the cost of any medical and psychological evaluations of potential living donors who are excluded from donation (e.g., because of medical or immunologic issues discovered during the evaluation process);
   b. costs incurred in arranging and effecting the pre-, peri- and post-operative phases of the donation process (e.g., long-distance telephone calls, travel, accommodation and subsistence expenses);
   c. medical expenses incurred for post-discharge care of the donor;
   d. lost income in relation to donation (consistent with national norms).
