The Declaration of Istanbul on Organ Trafficking and Transplant Tourism

Participants in the International Summit on Transplant Tourism and Organ Trafficking convened by The Transplantation Society and International Society of Nephrology
in Istanbul, Turkey, April 30–May 2, 2008

Preamble

Organ transplantation, one of the medical miracles of the twentieth century, has prolonged and improved the lives of hundreds of thousands of patients worldwide. The many great scientific and clinical advances of dedicated health professionals, as well as countless acts of generosity by organ donors and their families, have made transplantation not only a life-saving therapy but a shining symbol of human solidarity. Yet these accomplishments have been tarnished by numerous reports of trafficking in human beings who are used as sources of organs and of patient-tourists from rich countries who travel abroad to purchase organs from poor people. In 2004, the World Health Organization, through its Commission on Human Rights and National Organ Donation and Transplant Policies, called for a worldwide summit to focus on these issues. The Transplantation Society and the International Society of Nephrology then called a summit on the subject in Istanbul in April 2008.

The Declaration of Istanbul is a statement of principles and goals for improving the ethical conduct of organ transplantation and organ trafficking. It calls for the development of national and international policies to prevent these practices and to ensure that transplantation is conducted in accordance with ethical principles. The Declaration is the result of a collaborative effort among medical professionals, human rights advocates, and other stakeholders.

The Declaration of Istanbul is not a legal document, but it is intended to serve as a framework for national and international policies and practices. It is hoped that the Declaration will help to ensure that transplantation is conducted in a manner that is consistent with ethical principles and that respects the rights of all people.
Organization, called on member states “to take measures to protect the poorest and vulnerable groups from transplant tourism and the sale of tissues and organs, including attention to the wider problem of international trafficking in human tissues and organs” (1).

To address the urgent and growing problems of organ sales, transplant tourism and trafficking in organ donors in the context of the global shortage of organs, a Summit Meeting of more than 150 representatives of scientific and medical bodies from around the world, government officials, social scientists, and ethicists, was held in Istanbul from April 30 to May 2, 2008. Preparatory work for the meeting was undertaken by a Steering Committee convened by The Transplantation Society (TTS) and the International Society of Nephrology (ISN) in Dubai in December 2007. That committee’s draft declaration was widely circulated and then revised in light of the comments received. At the Summit, the revised draft was reviewed by working groups and finalized in plenary deliberations.

This Declaration represents the consensus of the Summit participants. All countries need a legal and professional framework to govern organ donation and transplantation activities, as well as a transparent regulatory oversight system that ensures donor and recipient safety and the enforcement of standards and prohibitions on unethical practices. Unethical practices are, in part, an undesirable consequence of the global shortage of organs for transplantation. Thus, each country should strive both to ensure that programs to prevent organ failure are implemented and to provide organs to meet the transplant needs of its residents from donors within its own population or through regional cooperation. The therapeutic potential of deceased organ donation should be maximized not only for kidneys but also for other organs, appropriate to the transplantation needs of each country. Efforts to initiate or enhance deceased donor programs are essential to minimize the burden on living donors. Educational programs are useful in addressing the barriers, misconceptions and mistrust that currently impede the development of sufficient deceased donor transplantation; successful transplant programs also depend on the existence of the relevant health system infrastructure.

Access to healthcare is a human right but often not a reality. The provision of care for living donors before, during and after surgery—as described in the reports of the international forums organized by TTS in Amsterdam and Vancouver (2-4)—is no less essential than taking care of the transplant recipient. A positive outcome for a recipient can never justify harm to a live donor; on the contrary, for a transplant recipient the outcome of transplantation must not be the impoverished victims of organ trafficking and transplant tourism but rather a celebration of the gift of health by one individual to another.

Definitions

Organ trafficking is the recruitment, transport, transfer, harvesting or receipt of living or deceased persons or their organs by means of the threat or use of force or other forms of coercion, of abduction, of fraud, of deception, of the abuse of power or of a position of vulnerability, or of the giving to, or the receiving by, a third party of payments or benefits to achieve the transfer of control over the potential donor, for the purpose of exploitation by the removal of organs for transplantation (6). Transplant commercialism is a policy or practice in which an organ is treated as a commodity, including by being bought or sold or used for material gain. Travel for transplantation is the movement of organs, donors, recipients or transplant professionals across jurisdictional borders for transplantation purposes. Travel for transplantation becomes transplant tourism if it involves organ trafficking and/or transplant commercialism or if the resources (organs, professionals and transplant centers) devoted to providing transplants to patients from outside a country undermine the country’s ability to provide transplant services for its own population.

دستورکاری‌های پیوند: سیاست یا روش که عوانی کلا برا ی اهداف مادی، خرد و فروم شود.

مسافرت جهت دریافت پیوند: به انتقال عضو دهنده، گیرنده، یا متخصصین پیوند با هم یا انجام انجام یپوند اما در خارج از پرونده قانونی اطلاع می‌شود. مسافرت جهت دریافت پیوند زمانی توریسم پیوندی است که شامل فاصله اعتماد و سواگری در پیوندی و اولین اطلاعات از منابع پیوندی شامل اعضای، متخصصین و مراکز پیوند به جای استفاده از پیوند خود از کشورها یا پیوند خارج از کشورهای درون یا بین‌المللی

Definitions

Organ trafficking is the recruitment, transport, transfer, harvesting or receipt of living or deceased persons or their organs by means of the threat or use of force or other forms of coercion, of abduction, of fraud, of deception, of the abuse of power or of a position of vulnerability, or of the giving to, or the receiving by, a third party of payments or benefits to achieve the transfer of control over the potential donor, for the purpose of exploitation by the removal of organs for transplantation (6).

Transplant commercialism is a policy or practice in which an organ is treated as a commodity, including by being bought or sold or used for material gain.

Travel for transplantation is the movement of organs, donors, recipients or transplant professionals across jurisdictional borders for transplantation purposes. Travel for transplantation becomes transplant tourism if it involves organ trafficking and/or transplant commercialism or if the resources (organs, professionals and transplant centers) devoted to providing transplants to patients from outside a country undermine the country’s ability to provide transplant services for its own population.
Principles

1. National governments, working in collaboration with international and non-governmental organizations, should develop and implement comprehensive programs for the screening, prevention and treatment of organ failure, which include:
   a. The advancement of clinical and basic science research;
   b. Effective programs, based on international guidelines, to treat and maintain patients with end-stage diseases, such as dialysis programs for renal patients, to minimize morbidity and mortality, alongside transplant programs for such diseases;
   c. Organ transplantation as the preferred treatment for organ failure for medically suitable recipients.

2. Legislation should be developed and implemented by each country or jurisdiction to govern the recovery of organs from deceased donors and the practice of transplantation, consistent with international standards.
   a. Financial considerations or material gain of any party must not influence the application of relevant allocation rules.
   b. The practice of donation and transplantation requires oversight and accountability by health authorities in each country to ensure transparency and safety;
   c. Oversight requires a national or regional registry to record deceased and living donor transplants; and defined responsibilities and accountabilities for all stakeholders in the national organ donation and transplant system.

3. Organs for transplantation should be equitably allocated within countries or jurisdictions to suitable recipients without regard to gender, ethnicity, religion, or social or financial status.
   a. Financial considerations or material gain of any party must not override primary consideration for the health and well-being of donors and recipients.

4. The primary objective of transplant policies and programs should be optimal short- and long-term medical care to promote the health of both donors and recipients.
   a. Financial considerations or material gain of any party must not influence the application of relevant allocation rules.

5. Jurisdictions, countries and regions should strive to achieve self-sufficiency in organ donation by providing a sufficient number of organs for residents in need from within the country or through regional cooperation.
   a. Collaboration between countries is not inconsistent with national self-sufficiency as long as the collaboration protects the vulnerable, promotes equality between donor and recipient populations, and does not violate these principles;
   b. Treatment of patients from outside the country or jurisdiction is only acceptable if it does not undermine a country’s ability to provide transplant services for its own population.

6. Organ trafficking and transplant tourism violate the principles of equity, justice and respect for human dignity and should be prohibited. Because transplant commercialism targets impoverished and otherwise vulnerable donors, it leads inexorably to inequality and injustice and should be prohibited. In Resolution 44/25, the World Health Assembly called on countries to prevent the purchase and sale of human organs for transplantation.
   a. Prohibitions on these practices should include a ban on all types of advertising (including electronic and print media), soliciting, or brokering for the purpose of transplant commercialism, organ trafficking, or transplant tourism.
   b. Such prohibitions should also include penalties for acts—such as medically screening donors or organs, or transplanting organs—that aid, encourage, or use the products of, organ trafficking or transplant tourism.
c. Practices that induce vulnerable individuals or groups (such as illiterate and impoverished persons, undocumented immigrants, prisoners, and political or economic refugees) to become living donors are incompatible with the aim of combating organ trafficking, transplant tourism and transplant commercialism.

طروح ماي بيشناهي:
بر اساس اين اصول شرکت كنندگان در مجمع استانبول راهگامهای زير را جهت افزایش تعداد درمان دهنده عفو و جلوگیري از فاصله، سوادگي و توزيع پيوند و تشييقد برنامه هاي درست پيوند بيشناهي در نماینده.

1- دولت ها ما همکاری مخصوص و مراکز پزشكي و سازمان هاي غير دولتي عملکرد مناسب جهت افزایش پيوند از جمد به عمل آورد.
2- در کشورهای كه پيوند از جمد درمان نمي كرد، قانون كهايي قانوني در جهت زودرس برنامه پيوند از جمد كنست. پيوند از جمد به جا می آيي.
3- پيوند از جمد به گيري شود.
4- از جمد درمان كرومي.
5- کشورهاي كه برنامه مدوني براي اما كه از جمد درمان جهت انتقال تجربيات و اطلاعات و تکنولوژي خود به کشورهاي نيازمند تروشيپ کردند.
6- اهداف باید بوسیله نماینده دولتي و ارگانهای اجتماعي به عناوين یک عمل قهرمانی
7- سازمانی مسئول براي محافظت از دهنده باید مسئولیت امتحان و شفای داشته و پاسخگو باشد.
2. In countries without established deceased organ donation or transplantation, national legislation should be enacted that would initiate programs:

1. Governments, in collaboration with health care institutions, professionals, and non-governmental organizations should take appropriate actions to increase deceased organ donation. Measures should be taken to remove obstacles and disincentives to deceased organ donation.

2. In countries without established deceased organ donation or transplantation, national legislation should be enacted that would initiate deceased organ donation and create transplantation infrastructure, so as to fulfill each country’s deceased donor potential.

3. In all countries in which deceased organ donation has been initiated, the therapeutic potential of deceased organ donation and create transplantation infrastructure, so as to fulfill each country’s deceased donor potential.

Consistent with these principles, participants in the Istanbul Summit suggest the following strategies to increase the donor pool and to prevent organ trafficking, transplant commercialism and transplant tourism and to encourage legitimate, life-saving transplantation programs:

**To respond to the need to increase deceased donation:**

1. Governments, in collaboration with health care institutions, professionals, and non-governmental organizations should take appropriate actions to increase deceased organ donation. Measures should be taken to remove obstacles and disincentives to deceased organ donation.

2. In countries without established deceased organ donation or transplantation, national legislation should be enacted that would initiate deceased organ donation and create transplantation infrastructure, so as to fulfill each country’s deceased donor potential.

3. In all countries in which deceased organ donation has been initiated, the therapeutic potential of deceased organ donation and transplantation should be maximized.

4. Countries with well established deceased donor transplant programs are encouraged to share information, expertise and technology with countries seeking to improve their organ donation efforts.

**To ensure the protection and safety of living donors and appropriate recognition for their heroic act while combating transplant tourism, organ trafficking and transplant commercialism:**

1. The act of donation should be regarded as heroic and honored as such by representatives of the government and civil society organizations.

2. The determination of the medical and psychosocial suitability of the living donor should be guided by the recommendations of the Amsterdam and Vancouver Forums (2-4).

   a. Mechanisms for informed consent should incorporate provisions for evaluating the donor’s understanding, including assessment of the psychological impact of the process;

   b. All donors should undergo psychosocial evaluation by mental health professionals during screening.

3. The care of organ donors, including those who have been victims of organ trafficking, transplant commercialism, and transplant tourism, is a critical responsibility of all jurisdictions that sanctioned organ transplants utilizing such practices.

4. Systems and structures should ensure standardization, transparency and accountability of support for donation.

   a. Mechanisms for transparency of process and follow-up should be established;

   b. Informed consent should be obtained both for donation and for follow-up processes.

5. Provision of care includes medical and psychosocial care at the time of donation and for any short- and long-term consequences related to organ donation.

   a. In jurisdictions and countries that lack universal health insurance, the provision of disability, life, and health insurance related to the donation event is a necessary requirement in providing care for the donor;

   b. In those jurisdictions that have universal health insurance, governmental services should ensure donors have access to appropriate medical care related to the donation event;

   c. Health and/or life insurance coverage and employment opportunities of persons who donate organs should not be compromised;

   d. All donors should be offered psychosocial services as a standard component of follow-up;

   e. In the event of organ failure in the donor, the donor should receive:

      i. Supportive medical care, including dialysis for those with renal failure, and

      ii. Priority for access to transplantation, integrated into existing allocation rules as they apply to either living or deceased organ transplantation.

6. Comprehensive reimbursement of the actual, documented costs of donating an organ does not constitute a payment for an organ, but is rather part of the legitimate costs of treating the recipient.

   a. Such cost-reimbursement would usually be made by the party responsible for the costs of treating the transplant recipient (such as a government health department or a health insurer);

   b. Relevant costs and expenses should be calculated and administered using transparent methodology, consistent with national norms;

   c. Reimbursement of approved costs should be made directly to the party supplying the service (such as to the hospital that provided the donor’s medical care);

   d. Reimbursement of the donor’s lost income and out-of-pockets expenses should be administered by the agency handling the transplant rather than paid directly from the recipient to the donor.

7. Legitimate expenses that may be reimbursed when documented include:

   a. the cost of medical and psychological evaluations of potential living donors who are excluded from donation (e.g., because of medical or immunologic issues discovered during the evaluation process);

   b. costs incurred in arranging and effecting the pre-, peri- and post-operative phases of the donation process (e.g., long-distance telephone calls, travel, accommodation and subsistence expenses);

   c. medical expenses incurred for post-discharge care of the donor;

   d. lost income in relation to donation (consistent with national norms).
